Experience

Software Engineering Technical Leader, Isovalent (at Cisco) – New York, NY Jun 2025 – Present

- Develop and maintain a Kubernetes operator and supporting tooling that automates the provisioning, installation, and lifecycle management of Isovalent Enterprise Platform appliances (such as Isovalent LoadBalancer) in customer cloud environments.
- Developed a continuous benchmarking and profiling pipeline for Isovalent LoadBalancer, generating performance metrics that we use internally to track improvements/regressions and inform customer-facing marketing collateral.
- Work with customers to diagnose and resolve Cilium Enterprise issues in their environments, delivering fixes and patches upstream.

Senior Staff Software Engineer, Equinix – New York, NY Dec 2022 – Jun 2025

- Developed and maintained services powering a VMaaS platform for deploying VNFs in edge facilities.
- Led the CAS (Cloud Adjacent Storage) product, integrating with vendors like Dell PowerStore, Pure Storage, and NetApp to manage customer appliances and collect telemetry data.
- Maintained and improved tooling to automate operating system builds for our various skews of baremetal hardware available on Equinix Metal.
- Contribute to our open source Equinix Metal SDKs and Terraform provider.

Senior Software Engineer, LifeOmic – Raleigh, NC July 2022 – Nov 2022

- Designed and implemented a SAML IdP service, allowing our Wellness Platform customers to build integrations with our API.
- Lead development for our Terraform Provider and supporting Go SDK for public facing resources on our API integrations.
- Developed a service to generate and deploy white-labeled versions of our Wellness app to customer app store accounts.

Software Engineer, Linode (acquired by Akamai) – Philadelphia, PA Feb 2020 – July 2022

- Maintained large open source projects including terraform-provider-linode, linodego, and linode-cloud-controller-manager, with contributions to Ansible, SaltStack, and the Kubernetes Cluster Autoscaler.
- Built tooling to automate Kubernetes control plane upgrades in LKE, reducing manual effort and increasing rollout confidence.
- Maintained and improved a suite of Kubernetes controllers facilitating managed customer control planes on LKE.
- Participated in a small team on-call rotation monitoring management clusters, Load Balancers, and managed customer Kubernetes Control Planes.

Software Engineer, LifeOmic – Raleigh, NC Jan 2019 – Feb 2020

- Built services to support business-customer VoIP and video call confrencing, scheduling, metering and billing.
- Contributed to various supporting open source projects, especially in the AWS serverless ecosystem.
- Took ownership in improving company-wide release pipelines for deploying mobile apps and Lambda-based services.
- Implemented an external service billing system.

Junior Optimization Engineer, Brooks Bell – Raleigh, NC April 2018 – Jan 2019

- Implemented front-end and server-side A/B testing for fortune 500 companies such as Gap, Fedex, Suntrust, and American Express.
- Developed an internal data ingestion pipeline and visualization dashboard for A/B testing outcomes.
- Engineered internal tools to aid in the development of external A/B tests and improve developer experience for the team.

Technologies

Languages: Golang, Rust, Elixir, Swift, Python, TypeScript, Bash, SQL

Technologies: Kubernetes, Containers, QEMU, VPP, Nix, Terraform, Ansible, SaltStack, Git
