Experience

Senior Staff Software Engineer, Equinix – New York, NY (&Remote) Dec 2022 – Present

- Develop and maintain services to support our VMaaS platform that allows customers to deploy VNFs (Virtual Network Functions) in our edge facilities.
- Served as team lead on the CAS (Cloud Adjacent Storage) product and worked with vendors like Dell PowerStore, Pure Storage, and NetApp to develop APIs that allow us to integrate with and manage customer leased appliances and collect vital telemetry data for seamless customer operations and monitoring.
- Maintained and improved tooling to automate operating system builds for our various skews of baremetal hardware available on Equinix Metal.
- Contribute to our open source Equinix Metal SDKs and Terraform provider.

Senior Software Engineer, LifeOmic – Raleigh, NC July 2022 – Nov 2022

- Designed and implemented a SAML IdP service, allowing our Wellness Platform customers to build integrations with our API.
- Lead development for our Terraform Provider and supporting Go SDK for public facing resources on our API integrations.
- Developed a service to generate white-labeled versions of our Wellness app with automated deployment to our customer's Google Play and App Store accounts.

Software Engineer, Linode (acquired by Akamai) – Philadelphia, PA March 2022 – July 2022

- Maintained several large open source projects such as terraform-provider-linode, linodego, linode-cloud-controller-manager, etc., as well as Linode-specific contributions for Ansible, SaltStack, and the Kubernetes Cluster Autoscaler.
- Built a tool to automate and formalize the release upgrade process for customer Kubernetes control planes in LKE, reducing manual effort and increasing rollout confidence.
- Maintained and improved a suite of Kubernetes controllers facilitating managed customer control planes on LKE.
- Participated in a small team on-call rotation monitoring management clusters, Load Balancers, and managed customer Kubernetes Control Planes.

Software Engineer, LifeOmic – Raleigh, NC Jan 2019 – Feb 2020

- Built services to support business-customer VoIP and video call conferencing, scheduling, metering and billing.
- Contributed to various supporting open source projects, especially in the AWS serverless ecosystem.
- Took ownership in improving company-wide release pipelines for deploying mobile apps and Lambda-based services.
- Implemented an external service billing system.

Junior Optimization Engineer, Brooks Bell – Raleigh, NC April 2018 – Jan 2019

- Implemented front-end and server-side A/B testing for fortune 500 companies such as Gap, Fedex, Suntrust, and American Express.
- Developed an internal data ingestion pipeline and visualization dashboard for A/B testing outcomes.
- Engineered internal tools to aid in the development of external A/B tests and improve developer experience for the team.

Freelance Software Engineering May 2017 – Present

- Built a phone routing system under very low budget constraints using a 100% serverless AWS architecture for a start up.
- Develop accessible, fullstack web apps to customer spec.
